TOTAL RESULTS: 5 CHART KEY: T Data Set 1

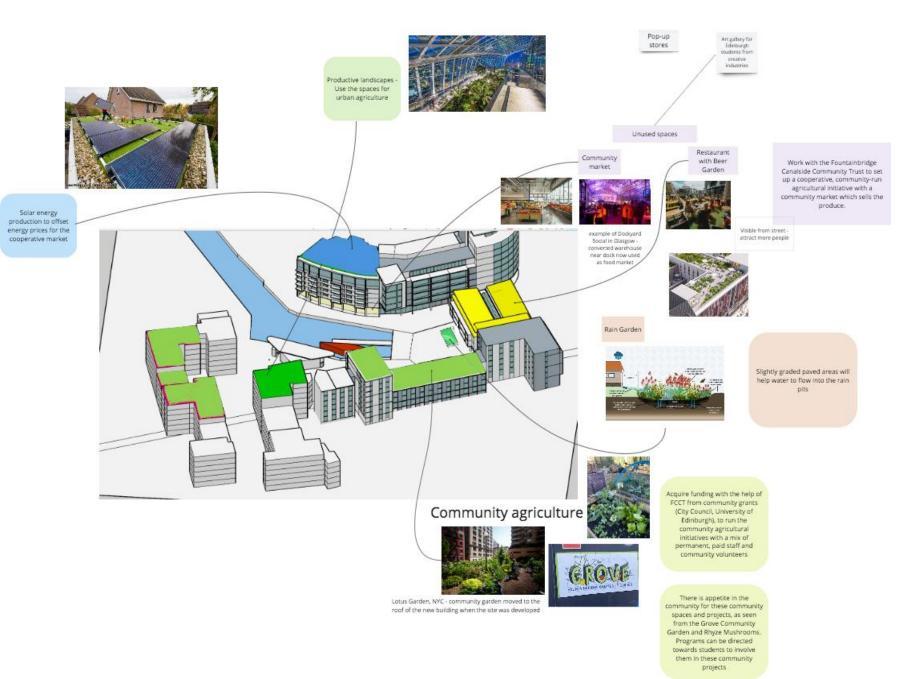

Place Standard Tool

Results show that we were most concerned about social interaction, sense of control, and feelings of belonging in the area. We felt that the site lacked a sense of distinct identity. These points really emphasise the need we saw for a more lively environment and more integrated sense of community. Main problems we identified on the site. We used the physical model of the site to highlight these in order to narrow down the main areas we wanted to focus on and to help us identify the main areas associated with these problems

> Lack of social interaction/connection
> Lack of green space
> Need for more social and economic opportunities

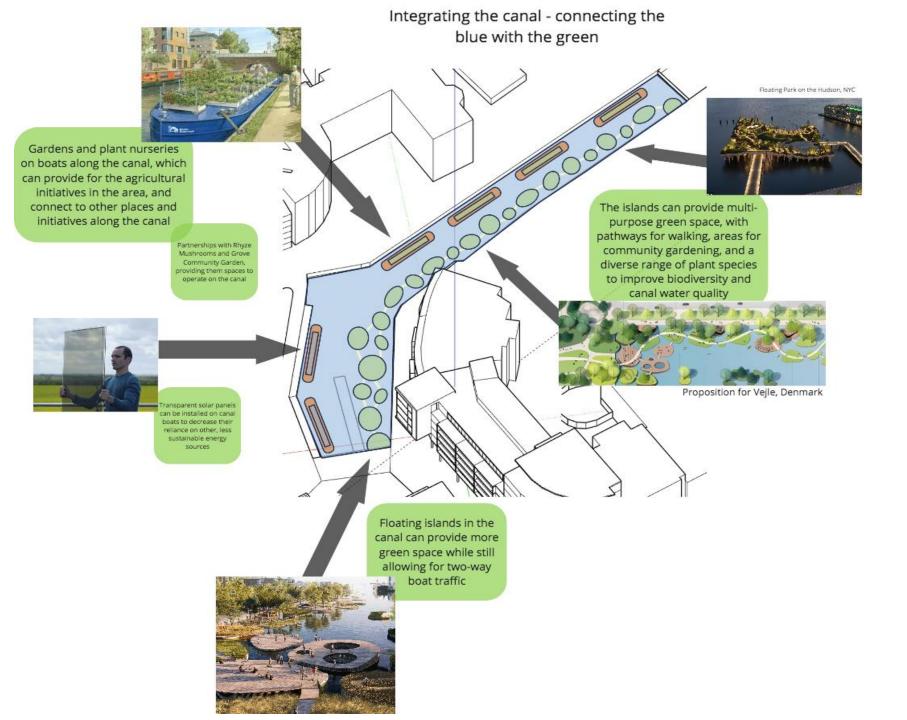

Productive landscape transformations

Main objectives were to:

- Increase greenspace through rooftop gardens
- Improve community cohesion/foster community participation through community gardens/agriculture
- Initiatives to create circular economy for local community – food markets from community-grown produce
- Provide local, sustainable and self-sufficient energy through solar panels

Approaches along the canal aim to increase green space on the site, add to the aesthetic of the area, and create more of a 'landmark' out of the site – giving it a distinctive sense of place and attraction for more people to the site.
